

Tools4ever releases User Management Resource Administrator version 7.3

New York, NY (October 1st, 2005) – Tools4ever, leading provider of disk quota, user management and network management solutions, today announced the release of User Management Resource Administrator version 7.3. The tool offers administrators the latest technology for controlling and updating user data in ActiveDirectory. With the powerful built-in drag-and-drop scripting actions, even the most complex user management tasks can be performed without any knowledge of scripting languages.

Some key benefits of UMRA 7.3. include:

- **Easy and safe control over user data in Active Directory** – complexity of procedures and script logic to make changes in ActiveDirectory is handled completely by UMRA. Using standard UMRA functionality for instance, you could simply select users in a table to move from department A to B and have Active Directory updated with one push of the button. Version 7.3 comes with a wealth of new functionality, such as moving Exchange mailboxes, moving users cross domain, etc. ;
- **Printer queue management** - – In UMRA version 7.3 you can display a list of printer jobs and manage these in UMRA ;
- **Services management** – In UMRA version 7.3 you can list the services running on a specific computer and manage these (start, stop, pause, etc.) ;
- **Increased efficiency** – no need for labour intensive and error sensitive script maintenance or excessive manual configurations ;
- **Improved data integrity** by centralizing and automating Active Directory administration ;
- **Reduced cost for network and systems administration** by automating complex user management tasks and delegating repetitive tasks to the helpdesk in a controlled fashion (e.g. resetting a password) ;
- **Improved provisioning** – UMRA can be customized to monitor changes in an information system (e.g. in an HR system or a Student Information System). When a mutation is found (e.g. when a new user is encountered), an action can be automatically executed for instance, to automatically update user rights and privileges in Active Directory. Version 7.3 now supports all major database types ;
- **Short learning curve** – creating scripts is a matter of dragging and dropping script actions. Many common administrator tasks (resetting passwords, moving mailboxes, creating home folders, etc.) can be constructed in less than an hour ;
- **Flexible architecture** – UMRA automation functionality can be invoked from any application supporting COM objects (Word, Excel, Access, etc.) ;

Pricing and Availability

User Management Resource Administrator 7.3 is available at no additional cost to current owners of UserManagement Import 5.x. Quotes can be requested online at <http://www.tools4ever.com/> or by calling (516) 482-4414. Additional information concerning pricing, licensing, and support policies is also available through these sources.
