

Tools4ever releases User Management Resource Administrator version 7.5 for Active Directory and all other directory services supporting LDAP

New York, NY (May 12th, 2006) – Tools4ever, leading provider of disk quota, user management and network management solutions, today announced the release of User Management Resource Administrator version 7.5. The tool offers administrators the latest technology for controlling and updating user data in ActiveDirectory and all other directory services supporting LDAP. With the completely revised interface, even the most complex user management tasks can be performed without any knowledge of scripting languages..

Some key benefits of UMRA 7.5. include:

- **New interface** – The main interface has been drastically improved. The key project concept of UMRA has always been the creation of an UMRA project script using input data from various sources ((CSV) files, databases, other applications). The main interface has been reworked to support this concept more strongly.
- **Managing LDAP directory services** – UMRA's powerful collection of script actions to manage directory services such as Novell eDirectory, Linux OpenLDAP and Microsoft's Active Directory has been enhanced with the possibility of moving directory service objects.
- **Improved project management control** – In UMRA version 7.5, projects are now organized in workspaces to improve control over (more) complex solutions which often involve the creation of multiple projects.
- **Increased efficiency** – no need for time consuming and error sensitive script maintenance or excessive manual configurations.
- **Improved data integrity** by centralizing and automating Active Directory administration.
- **Reduced cost for network and systems administration** by automating complex user management tasks and delegating repetitive tasks to the helpdesk in a controlled fashion (e.g. resetting a password).
- **Short learning curve** – creating scripts is a matter of dragging and dropping script actions. Many common administrator tasks (resetting passwords, moving mailboxes, creating home folders, etc.) can be constructed in less than an hour.
- **Flexible architecture** – UMRA automation functionality can be invoked from any application supporting COM objects (SQL Server, IIS, Access, etc.).

Pricing and Availability

User Management Resource Administrator 7.5 is available at no additional cost to current owners of UserManagement Import 5.x or older versions of UMRA. Quotes can be requested online at www.tools4ever.com/ or by calling (516) 482-4414. Additional information concerning pricing, licensing, and support policies is also available through these sources.

About Tools4ever

Tools4ever has established a worldwide reputation for providing cutting edge solutions in migration, user management and domain administration, network monitoring and disk space management. Product names such as SpaceGuard, MonitorMagic and UserManagemNT are well recognised across worldwide systems solutions markets.
