NIM —
Unlock Efficiency with Our Data-Driven Solution
Data Warehouse & ETL Support: The Backbone of Our NexGen Identity Management (NIM) Solution

Tools4ever Consultancy: Over 20 Years of Identity Management Experience Around the World

Streamlining User Lifecycle Management

NIM is built upon a robust foundation of a centralized data warehouse and powerful Extract, Transform, Load (ETL) processes. When new data enters your solution - whether from HR when hiring a new teacher or from the Student Information System when enrolling a new student - our agile ETL processes spring into action. They extract the data, meticulously transform it to align with your existing data architecture, and load it seamlessly into the data warehouse.

Through this centralized data hub, your entire district benefits from synchronized and consistent, real-time data. No matter the system, you can rest assured that the information is accurate and up-to-date. Our efficient processes extend beyond data entry; they also handle data updates, such as when a student graduates or a staff member departs. User profiles are automatically adjusted or deactivated across all systems, bolstering data security and alleviating administrative burdens.

Embrace the freedom that NIM offers, with its ability to reduce administrative tasks, elevate data accuracy, and fortify security measures. Our commitment to data privacy is unwavering, providing you with not just a goal, but an absolute guarantee. Experience the seamless integration, heightened efficiency, and peace of mind that our solution brings to your organization.

Enterprise IDM for Education

- ☑ **Integration with Top HR & SIS Solutions**
- ☑ **Data Warehouse & ETL Support**
- ☑ **Role Mining & Generation**
- ☑ **Compliance & Security**
- ☑ **Multi-system Auditing & Logging**
- ☑ **Secure Delegated Applications**

TOOLS4EVER
IDENTITY GOVERNANCE & ADMINISTRATION

Tailor-Made Applications & Precise Reporting

Flexible, Delegated Web Applications

NIM's reliance on a single source of truth - the data warehouse - enables the creation of secure, delegated web applications tailored to your district's unique needs. You can safely and efficiently pull accurate, up-to-date data from the data warehouse, adhering to data privacy regulations while addressing your district's specific challenges.

Top Requested NIM Web Applications

- ☑ Creation of single users based on current security models

- ☑ Allow teachers to reset student passwords in their respective classes

- ☑ User creation for substitute teachers with flexible auto-disable and reporting features

- ☑ Simplified reporting through user account reports across multiple systems

- ☑ User account change auditing, complete with before-and-after data

- ☑ Custom data queries for precise data reporting and updates

- ☑ Group management for target systems such as Azure, Active Directory, etc

- ☑ Ad-hoc user management complete with logging and audit reports

Data-Driven, Multi-System Reporting

The power of the data warehouse extends to reporting as well. NIM consolidates data from all sources, enabling precise, multi-system reporting. With this ability, your district can make informed, data-driven decisions that drive student success and operational efficiency.

Embrace the Future of Data Management

Invest in Your District's Success: It's time to propel your district into the future. With our NexGen Identity Management solution, your district gains operational efficiency, secure data management, and the power of informed decision making.

Exceed Regulatory Compliance: With NIM's robust ETL support, automated user data management, and secure data handling, data privacy isn't just a concern - it's a cornerstone.
